

Tired of the Waste and Overuse Associated with Creamer Cups?

A FlexoShot dispenser can help!

According to the National Coffee Association, approximately two-thirds of coffee drinkers whiten their coffee. Among whiteners, cream is the most popular with over one-third of consumers preferring this option. Half and half, whole milk, and reduced fat milk are used by nearly 15% of consumers, while fat free/skim milk is used by nearly 5%. For a successful coffee program, there is no question that whiteners need to be readily available for your guests.

Our research shows that when offering your guests creamer cups, 35-50% of the product goes to waste. A FlexoShot dispenser reduces this waste by controlling both usage and pilferage. The amount of money you will save on dairy alone will allow you to start seeing a return on investment within six months to two years, depending on coffee sales.

FEATURES AND BENEFITS:

- Available for one, two, or three product offerings
- Accommodate various dairy packaging including dairy bags, refillable containers, and bag-in-box formats
- Some models come with an illuminated door that grabs the attention of customers
- Proven refrigeration system ensures product quality, optimal shelf-life, and sanitation
- USA And Canada-wide Technical Service Network with SureShot Technical Assistance Center support
